About This Game

Fall of castles is a game for those who enjoy playing strategy games, with a disconnected tone, a simple gameplay and a moderate difficulty.

You will try to win an AI with a castle and units identical to you, and to win it you must destroy its castle before yours falls. Set up cool battles and let players deploy, select and move several different units in real time. Automatically spawned AI enemies will battle your troops and try to destroy your castles.
Deploy troops like giants, archers and knights to stop and defeat them!

Every character has it's own damage, health and minimal attack distance. This is something to take into account when playing, both attacking and defending, and it is something you should know if you want to win.
Characters look for the nearest enemy and attack it. Otherwise, if the enemy is out of range, they will attack the castle.

You can select a unit and deploy it in the battle arena. If you don't have enough gold to deploy the unit you will have to wait. You receive gold every 5 seconds and by killing enemies as well.

Click and drag with your mouse to create a rectangle and select troops in the arena. By clicking right mouse button, you can move the selected troops around.
